Full-stack software engineer with 3+ years of experience shipping production TypeScript and Rust systems, contributing to 10+ open-source organizations and merging 463+ pull requests.

Technical Skills

- Frontend Development: Next.js, JavaScript, React.js, TailwindCSS, Tauri
- Backend Development: TypeScript, Ruby, Rust, Go, Python, Node.js, Bun, Express.js, Rails, tRPC, Zod, REST APIs, GraphQL API
- Databases and ORMs: PostgreSQL, MongoDB, SQLite, Drizzle ORM, Prisma ORM
- Testing and DevOps: Playwright, E2E Testing, Docker, CI/CD, GitHub Actions, Homebrew
- Infrastructure and Systems: Shell, Linux, Debian, Make, Terraform

Experience

Screenpipe - Founding Engineer (YC S26) Apr 2026 - Present
Remote

- Built the **Connections Platform**: generic OAuth and integrations for Slack, Jira, Gmail, Microsoft 365, Notion, Supabase, QuickBooks, and 12+ services powering Pi Chat and Pipes; **212+** merged PRs.
- Owned **AI gateway and chat** reliability: usage limits, provider outages, streaming, drafts, attachments, and presets.
- Shipped **Windows desktop** reliability: WebView2 browser, extension pairing, locked-binary installs, overlay routing, and capture edge cases.
- Fixed meetings and capture pipelines: **live STT recovery**, audio-stall false positives, recording schedules, and vision permissions.

CX Linux AI - Contract Software Engineer / Maintainer Dec 2025 - Feb 2026
Remote

- Led development of an **AI-native Linux distribution** (paid **\$5K contract**), building the initial system including an **AI-powered terminal**, hybrid ISO (live boot + installer), and automated build pipelines.
- Improved platform reliability and development velocity by contributing to core infrastructure (Debian packaging, Python 3.13 support, CI/CD), while reviewing **121+ pull requests** across distro tooling, packaging, and CI.

Antiwork - Contract Software Engineer Jul 2025 - Oct 2025
Remote

- Earned **\$40,000+** in open-source bounties through Flexile and merged **55+ PRs** across Antiwork repositories including Helper, Flexile, and Gumboard.
- Designed and shipped **Equity Management** features in Flexile - including Cap Tables, Option Pools, and Lawyer Management UI - while migrating company updates and related modules from **tRPC** to a **Rails API**.
- Improved Helper.ai by refactoring from multi-tenant to single-tenant architecture, removing legacy encryption, adding **6 major E2E tests** and fixing flaky ones, improving reliability, deployment, and developer experience.

TSCircuit - Software Engineer / Maintainer Aug 2024 - Jun 2025
Remote

- **\$2700+** in bounties and sponsorships; contributed to the core library (tscircuit-core) with **180+ merged PRs**.
- Boosted flaky test coverage from **5% to 95%+** using **Playwright** in the Maintenance project.
- Built the **Issue Roulette Game** frontend using **Next.js + TypeScript** and developed the Contribution Tracker dashboard.

Awards and Achievements

- Got accepted into **Y Combinator Startup School** (India cohort).
- Won Top 20 in the PR category at the Automate Me If You Can Hackathon (**\$3000 prize pool**) organized by Accomplish AI and WeMakeDevs.

Open Source Contributions

- Contributed to **Mediar AI**, improving AI automation workflows and building practical examples, with **20+ merged PRs** and earning **\$800+** in bounties.
- Contributed to repositories across multiple open-source organizations including Archestra AI, TwentyHQ, Sugar Labs, and Algora.io.
- Participated in the **European Summer of Code 2026**, contributing to the Rattler repository.

Education

Birla Institute of Technology, Mesra (Jaipur Campus)

Bachelor of Technology in Artificial Intelligence

- Current CGPA: 8.67 / 10

Jaipur, India

Aug 2023 - May 2027 (Expected)
